1. Introduction

Accounts++ is simple online accounting application. It is useful for companies to record their account. It allows different types of accounting entries eg. Sales,purchase,cash,Journal entries... etc. User can see final status of their origination using final accounting statements like Balance sheet and Profit & Loss account.

1.1 Abstract

Accounts++ is web application built with ASP.NET Framework. User can register their company and then he/she can record their companies accounts securely. It provide accounting in same way as it was being done traditionally. Accounts++ provides different types of transaction entries which fulfill all the requirements of financial accounting system.

1. Sale Entry
2. Purchase Entry
3. Sale Return Entry
4. Purchase Return Entry
5. Income Entry
6. Expanse Entry
7. Cash Transaction Entry
8. Journal Entry (All other types of entries)

It also provide following reports which are very useful for analysis.

1. Sale Book
2. Purchase Book
3. Sale Return Book
4. Purchase Return Book
5. Cash Book
6. Income/Expanse Report
7. Ledger Reports

It also provide final account reports.

1. Trial Balance
2. Trading and Profit & Loss Account
3. Balance Sheet

1.2 Scope & Objective

Scope:

Scope of this project is in accounting system of company. Every small/big company keeps accounts. This online application provide some simple accounting for small companies with ease of use and no complexity.

Objective:

1. Keep record of all Financial transactions.
2. Maintain Accounting Accuracy.
3. Provide Accounting Reports for better analysis.
4. Gives Idea of company's financial status by providing final accounts.

2.Requirement Analysis

2.1 Requirement Gathering.

Terms Used:

- **Account:** it is a record in the general ledger that is used to collect and store debit and credit amounts. Sometimes it is also Called Ledger.

Following Requirements are gathered for our Accounting Application “Accounts++” by analyzing accounting application available in market.

1. System Should allow Recording financial transactions for financial year.
2. User should be allowed to create/update/delete Accounts(Ledgers) as needed.
3. System must follow basic rules of financial accounting system. eg. there must be three types of accounts (Personal Accounts, Real Accounts and Profit & Loss Accounts) and System must follow rules for particular account.
4. System should be able to record transactions accurate.
5. System should be able to record all types of transactions which are financial transactions.
6. System should keep subsidiary books like Purchase Book, Sales book etc..
7. System should be able to generate proper invoice on particular transaction. This invoice should be generated when it is demanded.
8. System should keep track of Inventory purchased and sold.
9. System must provide Ledger report when needed.
10. System must provide Final account Reports. Which are Balance Sheet, Profit & Loss account.

2.2 Requirement Analysis.

After Analyzing requirements gathered above We can satisfy all of above requirements except Requirement No. 8 “System should keep track of Inventory purchased and sold”. This requirement will need extra cost and time which are not allowed for this project.

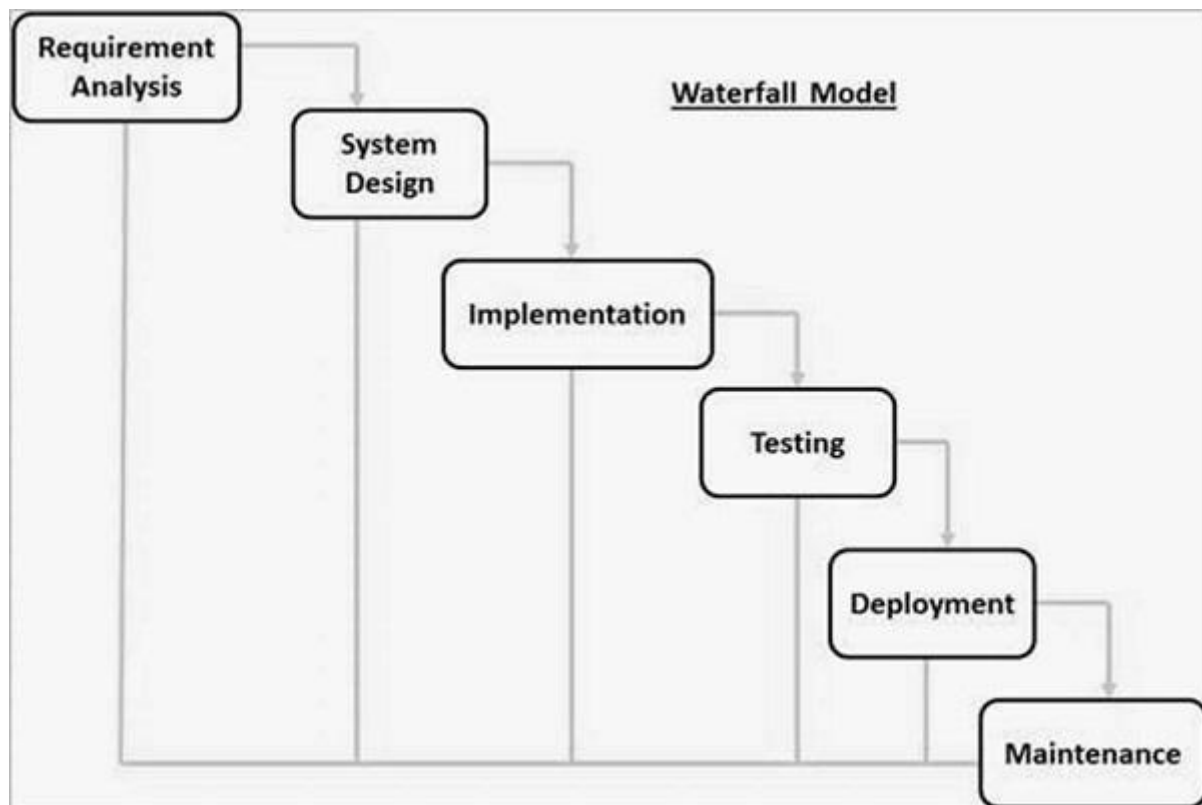

For Requirement No 7. “System should be able to generate invoice”. It can only generate invoice in fixed format defined by system. We can provide flexibility in invoice format in future.

2.3 Software Model.

As we have all requirements ready with us and there is no much risk in system so we will follow waterfall model for project development.

Waterfall model consists of 5/6 simple stages which are follow. where 2st stage is completed which is requirement analysis.

Accounts++

Project Title	Account++ (Online Accounting System)
Project Objective	Record and Maintain Company's Accounts online.
Name Of College	SDJ International College
Front-End Tool	ASP.NET
Back-End Tool	Ms Access Database along with ADO.NET
Operating System	Any Operating System with latest Browser Support. eg. Chrome, Firefox
Internal Guide	Nidhi Desai
Submitted By	Lohar Hamid A.

2.4 Technology Details.

3. Designing

3.1 Data Flow Diagram.

3.1.1 Context Level DFD

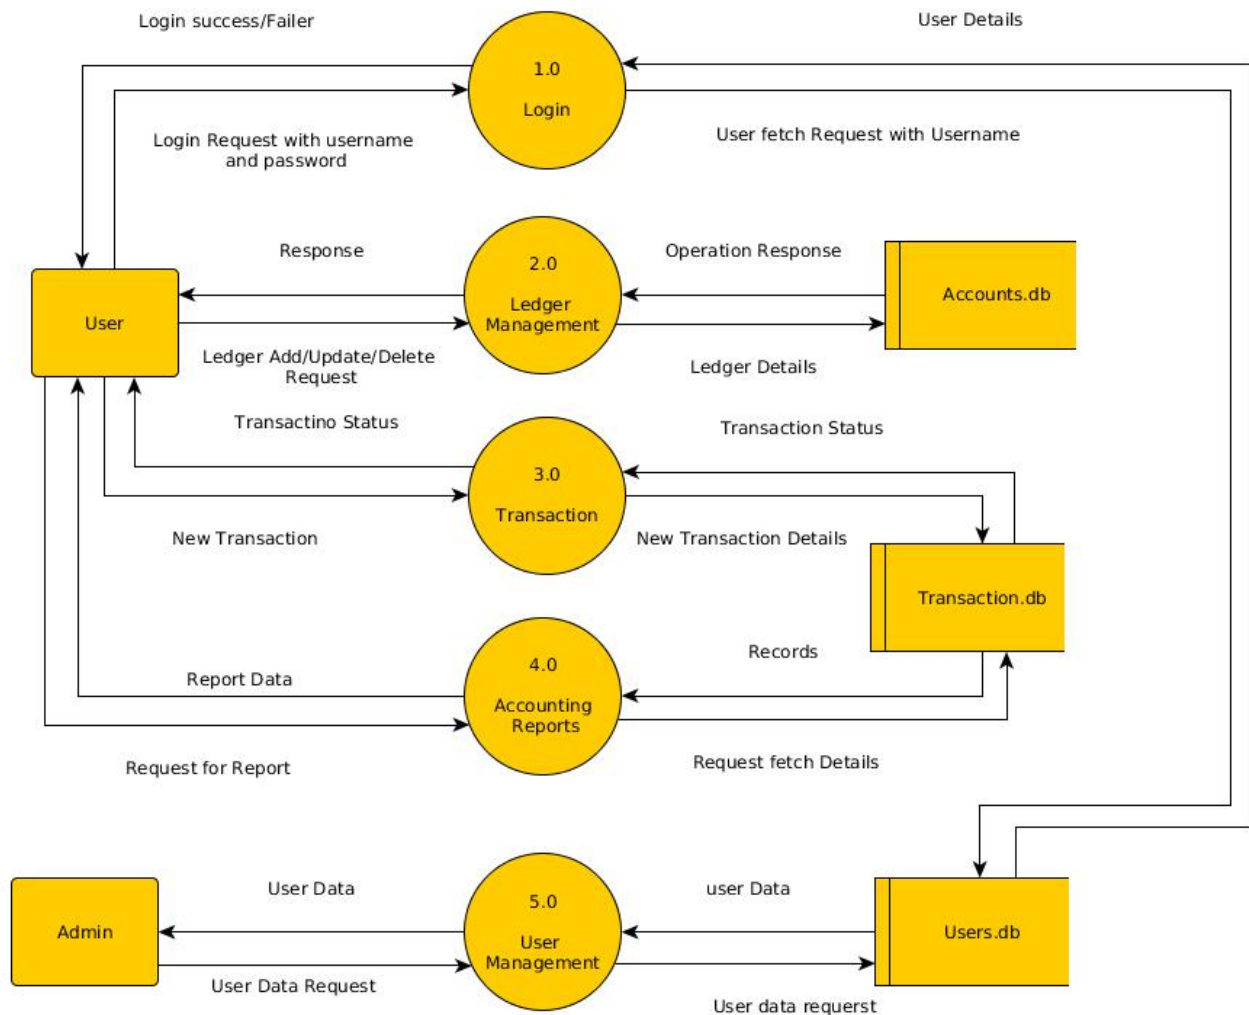

Context Level Data Flow Diagram for Accounts++

Accounts++

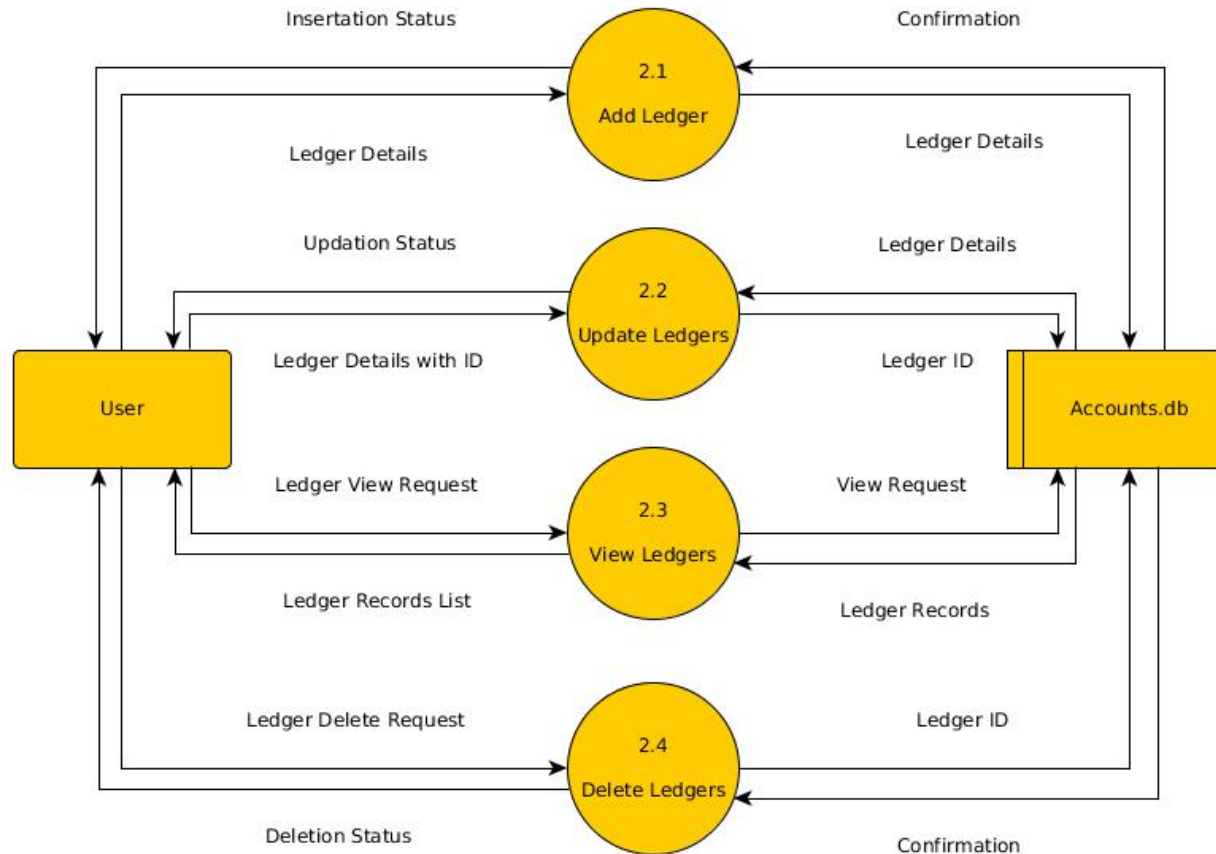

3.1.2 Level 1 DFD

Level 1 Data Flow Diagram for Accounts++

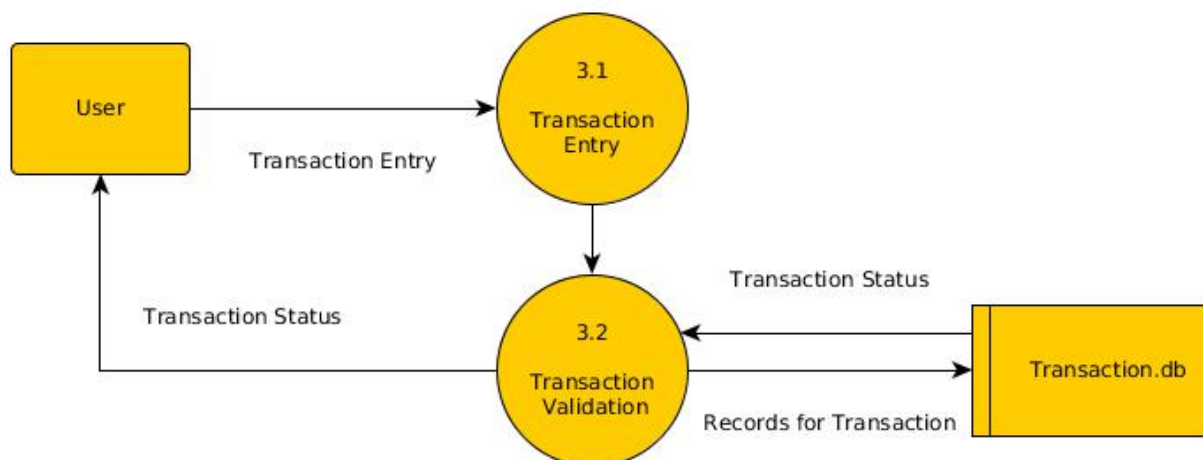

Accounts++

3.1.3 Level 2 DFD

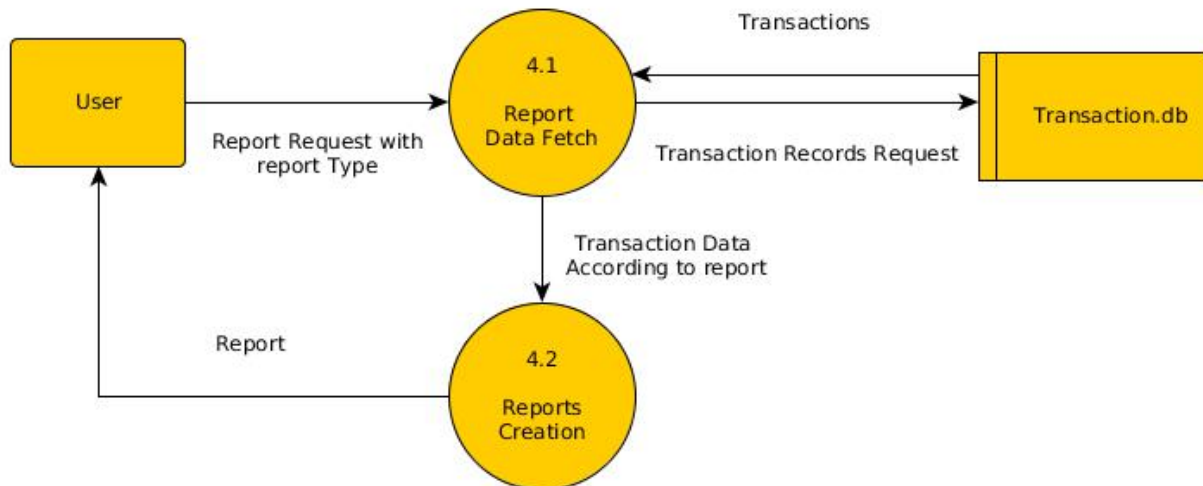

Level 2 Data Flow Diagram for Accounts++ (Ledgers)

Accounts++

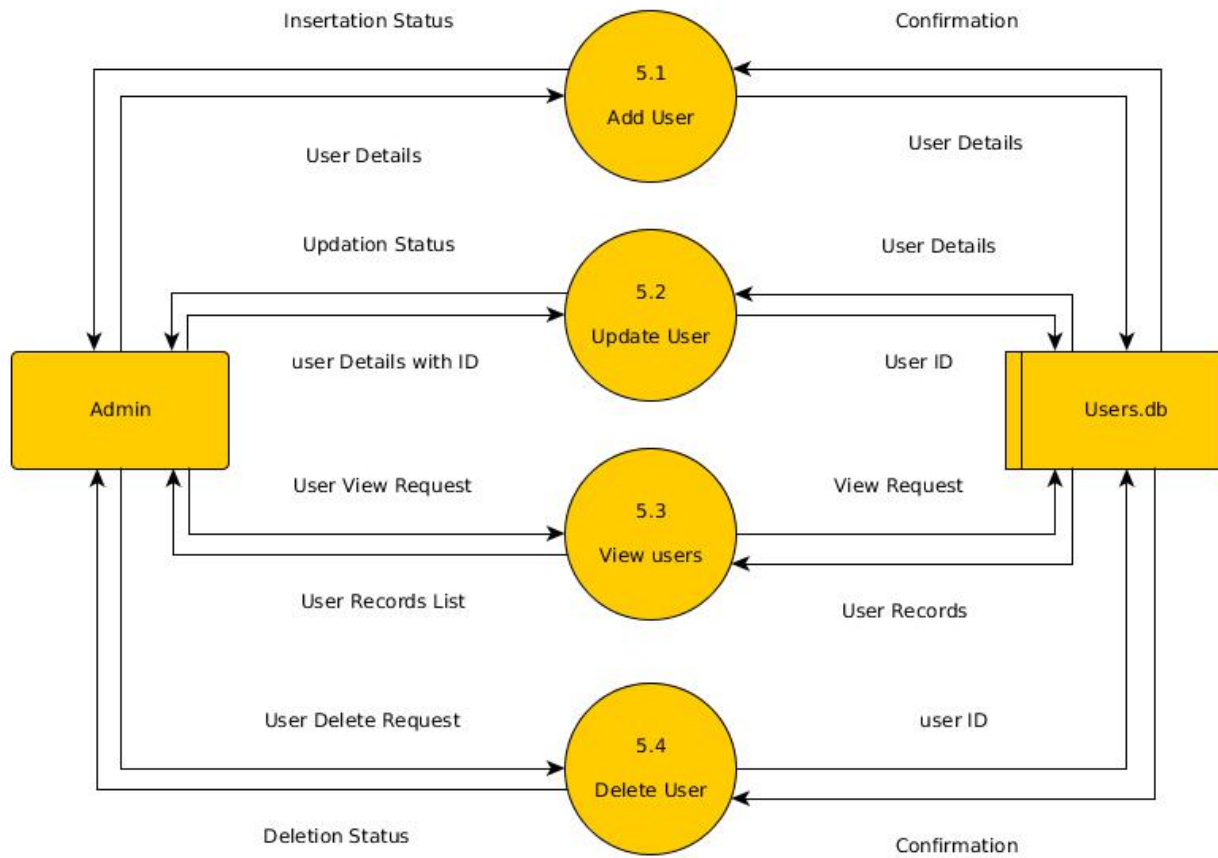

Level 2 Data Flow Diagram for Accounts++ (Transactions)

Level 2 Data Flow Diagram for Accounts++ (Reports)

Accounts++

Level 2 Data Flow Diagram for Accounts++ (Admin Side)

3.2 Database Design

Users

Column Name	Data Type	Description	Constraints
Id	Number	Unique ID of Users	Primary Key
CompanyName	Text	Full Name of Company	-
Username	Text	Unique Username for all users	-
Email	Text	Email of User	-
PhoneNo	Text	Contact detail of user	-
Password	Text	Password for user Login	-

Accounts

Column Name	Data Type	Description	Constraints
Id	Number	Unique ID of Account/Ledger	Primary Key
Name	Text	Name of Account	-
Type	Text	Account type (personal/pnl/real)	-
Balance	Number	Current Balance of Account	-
user_id	Number	Reference to User's Record	Foreign Key

Accounts++

Transactions

Column Name	Data Type	Description	Constraints
Id	Number	Unique ID of Transaction	Primary Key
ac_credit	Number	Reference to Account for Credit	Foreign Key
ac_debit	Number	Reference to Account for Debit	Foreign Key
amt_credit	Number	Amount to be credited	-
amt_debit	Number	Amount to be debited	-
Date	DateTime	Date of Transaction	-

3.2 User Interface

User Side Interface:

Master File for User side without login (Front.Master)

```
<%@ Master Language="VB" CodeFile="Front.master.vb" Inherits="Front" %>

                <p>
```

Accounts++ is lightweight web application to record your day to day financial transactions. It is not loaded with high end libraries and other high end stuff. It is made for simple and lightweight enviroment.

```
                </p>
            </div>
            <div class="feature-list-item">
                <h3>Available Anywhere </h3>
                <p>
```

Accounts++ is web application that means it will be available anywhere. One can use Accounts++ at office and same thing at home too it just need Username/password of user.

```
                </p>
            </div>
            <div class="feature-list-item">
                <h3>All type of Transactions are covered. </h3>
                <p>
```

With Accounts++ you can record any kind of business transaction. You can have following types of entries. and for other entries not listed here you can use Journal.

```
                <ul>
                    <li>Sales Entry </li>
                    <li>Sales Return Entry </li>
                    <li>Purchase Entry </li>
                    <li>Purchase Return Entry </li>
                    <li>Income Entry </li>
                    <li>Expance Entry </li>
                    <li>Journal Entry </li>
                </ul>
            </p>
        </div>
    <div class="feature-list-item">

Accounts++

Login.

The screenshot shows the Accounts++ website with a dark blue header containing 'Home', 'Features', and 'About' links. A modal form for login is centered on the screen. The modal has a close button (X) in the top right corner. It contains the following fields and text:

- Username: [Text Input]
- Password: [Text Input]
- Login [Button]
- Can't Login? Reset password
- Don't Have Account? Sign Up Now

In the background, the website content is partially visible, including a 'Contact Us' form on the right with fields for Name, Email, Subject, and Description, and a 'Send Message' button.

Sign Up:

The screenshot shows the Accounts++ website with the same dark blue header. A modal form for sign up is centered on the screen. The modal has a close button (X) in the top right corner. It contains the following fields and text:

- Enter your Name: [Text Input]
- Full Name [Text Input]
- Username: [Text Input]
- Email: [Text Input, containing 'ayx@example.com']
- Password: [Text Input]
- Retype Password: [Text Input]
- Date Of Birth: [Text Input, containing 'mm/dd/yyyy']
- Gender: ☒ Male ☐ Female
- Sign Up [Button]
- Already Have Account? Login Now Now

The background content is the same as the previous screenshot, showing the website layout and the 'Contact Us' form.

Description of Login and Signup page:

- Login and description pages are popup.
- It sends User's login or registration details to backend VB script dataModel.aspx and receives response using Ajax.

5.2 Environment Testing

This application is built using MS ASP.NET technology.

It will run on MS IIS server.

Tested with following Environments

Google Chrome 59 on windows 8

It can work on following browsers

Firefox version 40+

Internet Explorer 9+

Opera version 15+

5.3 Functional Testing

Following Functions are tested successfully.

- **Login Function:** Login function works perfectly It gives proper error on unsuccessful login.
- **Register Function:** Register function works perfectly It gives proper error on unsuccessful registration
- **Journal Entry Function:** It Works perfectly and insert correct entry
- **Sales Entry:** Login function works perfectly It gives proper error on unsuccessful login

- **Login Function:** Login function works perfectly It gives proper error on unsuccessful login
